Reasons For Allowance

None of the references discloses alone or in combination a method and apparatus for attaching an optical fiber to a waveguide formed on a PLC securing at least one joint element to a first surface of the PLC where the joint element having a beveled surface such that a gap formed between the joint element and the first surface of the PLC. An adhesive being applied between the first and second mating surfaces so that the first and second mating surfaces are fixed together, whereby adhesive that would otherwise enter an optical path located between the waveguide end face and the optical fiber face is diverted into the gap and also conducting excess adhesive from the interface and into a reservoir formed at least in part by the joint element before the excess adhesive enters an optical path located between the waveguide end face and the optical fiber end face along with other limitations claimed in claims 1, 15 and 22. Furthermore,
